

ABSTRACT OF THE DISCLOSURE

An automatic driver device (3) for joining components (2) of a driving station (1) is provided including a base support (8) that is provided with several automatic driving tools (4, 5), the driving tools being mounted thereupon so as to be movable in a multiaxial fashion. The movement is via adjusting mechanisms (9, 16, 17, 24, 25). Several of the automatic driving tools
5 (4, 5) are combined into at least one screwdriver group and are jointly mounted so as to be movable on the base support (8) by one of the adjusting mechanisms (9). One or several driving tools (4, 5) can be additionally mounted within the screwdriver group (6, 7) so as to be movable relative to each other by at least one other adjusting mechanism (9, 17, 25).
